

Enable Secret

Lab Summary

Configure an enable password with MD5 encryption for added security.

Figure 1 Lab Topology

Lab Configuration

Start Packet Tracer File: **Enable Secret**

Step 1: Click *Router-1* icon and select the *CLI* folder. Press <enter> key for user mode prompt.

Step 2: Enter global configuration mode

```
router-1 > enable  
router-1# configure terminal
```

Step 3: Configure an enable secret password *ccnaexam* with optimized MD5 cipher encryption.

```
router-1(config)# enable secret ccnaexam  
router-1(config)# end  
router-1# copy running-config startup-config  
router-1# show running-config
```

Lab Notes:

Cisco IOS command `service password-encryption` is not required when configuring enable secret password.
